

PROFESSIONAL SUMMARY

Lead UI Developer and Frontend Architect with over 5 years of expertise in the React and TypeScript ecosystem. Senior Consultant at Accenture specializing in digital transformation for Tier-1 financial institutions including Bank of America, Capital One, and American Express. Expert in Figma-to-Code deployment, micro-frontend architecture, and high-performance API orchestration. Proven leader in managing cross-functional teams to deliver scalable, enterprise-grade web applications.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Ruby, SQL, HTML5, CSS3, SCSS

Libraries & Frameworks: React.TS, Next.js, Material UI (MUI), Lightning Web Components (LWC), Node.js, Express, Ruby on Rails, Bootstrap

Data & Database: PostgreSQL, MongoDB, REST APIs, JSON, GraphQL

Tools & DevOps: Docker, Git, GitHub, CI/CD, AWS, Heroku, Netlify, Figma, Invision

Methodologies: Agile, Scrum, Technical Mentorship, Code Reviews, Software Quality Assurance (SQA)

PROFESSIONAL EXPERIENCE

Accenture | Lead UI Developer / Senior Analyst | May 2022 – Present

Senior Analyst deployed to Tier-1 financial institutions to spearhead large-scale digital modernization and UI architecture initiatives.

Bank of America (Client) | Lead UI Developer | December 2025 – Present

- Lead a cross-functional development team to deploy AI-generated React and TypeScript components into a complex legacy banking architecture.
- Architected responsive and accessible UI components to ensure seamless functionality across all device screen sizes.
- Conduct rigorous code reviews and provide technical mentorship to junior developers to solve complex logic and performance bottlenecks.
- Maintain deep architectural knowledge to ensure pixel-perfect design execution and rapid response to enterprise change requests.

Capital One (Client) | Lead UI React/TS Developer | 11 months

- Architected a modular Release Plugin designed as both a Backstage.io integration and a standalone React and Material UI micro-frontend.
- Migrated complex build-diagnostic logic from legacy Angular to a modern React and TypeScript ecosystem for independent platform deployment.
- Developed real-time dashboards for build error tracking and pipeline monitoring, including manual escalation and approval overrides.
- Decoupled core UI components to create a universal release dashboard utilized enterprise-wide across various internal environments.

American Express (Client) | UI Developer | 10 months

- Engineered high-performance React components from complex Invision prototypes, maintaining strict pixel-fidelity and maintainable SCSS architecture.
- Developed a custom data migration visual interface using **React Canvas**, enabling interactive tracking of large-scale cloud data movements.
- Optimized performance by designing efficient data-fetching logic that aggregated multiple API streams while minimizing time complexity and redundant network requests.

Zagat Survey | Software Quality Assurance Analyst

- Executed stress testing and performance benchmarking to identify high-traffic web application bottlenecks.
- Utilized SQL queries for deep-data validation to ensure the integrity of relational database results.

COMMUNITY LEADERSHIP & EDUCATION

Volunteer Programming Instructor | NYC Local High Schools

- Developed an OOP curriculum; mentored students through Python and p5.js game development.

NYC Coders | Technical Contributor & Mentor

- Facilitated workshops on Data Structures and Algorithms; provided code reviews via Discord.

General Assembly, NYC | Software Engineering Immersive

- Completed 500+ hour intensive program focused on full-stack development and architectural patterns.

Bronx High School of Science | Regents Diploma with Advanced Designation

EARLY REACT PROJECTS

Photo Co-Lab | Lead Developer

- **Architecture:** Engineered a real-time collaborative image processing application using **React** and **Axios**.
- **Key Features:** Implemented a non-destructive image editing engine allowing users to manipulate color, contrast, and saturation across multiple devices.
- **Technical Challenge:** Leveraged **Airtable** as a lightweight headless CMS to synchronize state between collaborating users, ensuring persistent data for shared editing sessions.
- [Live Demo](#)

Black Girls Code Redesign | Full-Stack Contributor

- **Collaboration:** Partnered in a cross-functional Agile team of developers and UX designers to execute a comprehensive site modernization.
- **Implementation:** Developed a responsive event-scheduling system using the **MERN stack (MongoDB, Express, React, Node.js)**.
- **Impact:** Improved cross-device accessibility and user engagement by optimizing frontend components for high-traffic usability.
